

OIL Hosts Townhall Under Project 'SANTULAN' to Unveil Comprehensive Environment Strategy on 19th February 2025 at Duliajan, Club, FHQ

In a significant stride towards environmental sustainability, Oil India Limited (OIL) hosted a Townhall meeting under Project "SANTULAN." This milestone event brought together the entire organisation including all executives and workmen to unveil OIL's Environment Strategy aimed at reducing emissions and tackling global challenges like climate change and global warming. Partnering with a renowned global strategy consulting firm, OIL is spearheading a transformative approach to sustainability that goes beyond conventional efforts.

The event was graced by Dr. Ranjit Rath, Chairman and Managing Director (CMD) of OIL; Shri Saloma Yomdo, Director (Exploration & Development); and Shri Trailukya Borgohain, Director (Operations), along with executives from OIL & NRL and employees from OIL's Field Headquarters.

During the event, all participants actively registered for an E-plantation drive with the objective of reducing their environment footprint and making the event Carbon neutral.

As part of the environment strategy, a Climate Academy was established which focused on equipping participants with the knowledge and skills to address critical ESG challenges. Over a period of eight weeks, nominated executives from OIL & NRL were engaged in an intensive learning journey, including live masterclasses led by globally recognized experts with experience of ESG and decarbonization of oil and gas operations. This initiative was adopted for the first time in the upstream Oil & Gas PSU sector to provide structured e-learning modules on ESG, decarbonization, and climate change. As part of this initiative, after completing the program, participants were designated as Climate Champions. A total of 43 executives successfully completed the program, and completion certificates were presented to them during the event.

Project "SANTULAN" was launched in 2024 in collaboration with a global strategy consulting firm. This strategic initiative goes beyond just achieving Net Zero emissions, encompassing a holistic approach to environmental stewardship by integrating non-GHG (non-Greenhouse Gas) parameters, such as water, biodiversity and waste, into OIL's environmental performance framework. By doing so, the aim is to significantly enhance OIL's overall ESG (Environmental, Social, and Governance) performance.
