It involves lowering of coiled tubing in stages to the bottom of the well or to the final depth as decided by the Company and displace the well fluid with nitrogen to the desired volume/ depth and make the well displace on its own. The job will also be applicable for unloading and lowering of fluid levels of wells prior to perforations.

b) De-waxing of well with CTU, NPU/ FPU with heating facility (HOCU)

The job involves circulating fluid through coiled tubing and simultaneously running the coiled tubing down the well judiciously. Utmost care to be taken during the job so that at no stage the tubing stuck up in wax or other materials takes place in the hole.

c) Well killing/well fluid change over with FPU, CTU

The job involves pumping of water to replace drilling fluid or work-over fluid or vice versa using FPU, CTU. For killing a well, requisite amount of suitable killing fluid at desired pressure should be pumped into the well bore to suppress inflow from the reservoir. In an emergent situation like blow out and uncontrollable release of well fluid, the well needs to be killed with the help of various units. In such an adverse situation, the crew must be prepared to work in war footing including hooking up of killing lines etc. at the well. The entire job will be carried out in presence and supervision of the Company's representative.

- E. Supply of requisite manpower.
- F. Acidization job execution
- G. Waste Management
- H. Monitoring & performance evaluation and generation of reports

e) Acidization job execution

The job involves the following basic procedural steps, but the operational steps may vary case to case depending upon the programs for individual wells:

- Tubing Integrity test
- Acid pickling
- Well bore clean out
- Acid Preflush
- Low strength main acid
- High strength main acid
- Over flush

- Foam diverter with CTU, NPU.

f) Horizontal Well CT intervention for Sand cleaning, water unloading, chemical treatment etc.

The job involves intervention of CT up to the bottom of the well (toe of the horizontal section) or to the desired depth by using CTU, NPU and FPU etc. with an objectives to clean sand, unloading of water or chemical treatment etc. Necessary tools and attachments required for horizontal intervention shall be arranged by the Contractor.

g) Injectivity testing of the well using FPU

The job involves injecting suitable liquid to the formation by pumping with FPU. The contractor shall ensure proper record of pumping rates (i.e. injectivity) at different pumping pressures.
