SECTION: II

SCOPE OF WORK OF/TERMS OF REFERENCE/ TECHNICAL SPECIFICATION

- 1.0 PREAMBLE: OIL INDIA LIMITED, a Government of India Enterprise, is a premier national oil & gas company engaged in exploration, production and transportation of crude oil & natural gas with its headquarters at Duliajan, Assam. The company has operating interests across the country as well as in several foreign countries. The major oil & gas producing assets of the company are located in Upper Assam Basin of North East India barring a small hydrocarbon producing asset in Rajasthan. The operational area is spread over a radius of 60 km from headquarters at Duliajan. Duliajan has railway and air connectivity with the nearest airport at Dibrugarh, 50 km away.
- 2.0 The company presently produces around 3.46 MMTPA of crude oil, over 6.6 MMSCM/day of natural gas and around 47000 tonnes of LPG from its acreages in North East India.
- 3.0 Geoscientific Exploration Work in Upper Assam
 - 3.1 The Upper Assam Basin is a Tertiary sub-basin of the Assam-Arakan geological province located in north-eastern part of the Indian subcontinent. It is bounded in the north by eastern Himalayas, in the south by Naga-Patkai Ranges, in the north east by Mishmi Hills and in the southwest by Mikir Hills and Shillong Plateau. The basin came into existence during Cretaceous and Early Cenozoic times and was located in a passive continental margin setting facing an open sea. The basin received clastic sediments in varied shallow marine to paralic and fluvial environmental conditions during its evolution through Tertiary period. The present day basement configuration reveals that the basement dips both towards south-east and north and north-west forming a basement ridge through the basin in a ENE-WSW direction. The basement ridge is the eastern continuation of Mikir Hills and runs almost parallel to present day Brahmaputra river. The sedimentary thickness ranges between 3.6-4.5 km. in the Basement ridge to more than 7 km in the Naga-Patkai ranges and Eastern Himalayan foothills region.
 - 3.2 Discovery of oil was made in the basin during later part of nineteenth century in Makum and Namdang areas near Margherita. The discovery of Digboi oilfield on the hanging wall of the Naga Thrust during 1889 brought in extensive exploration and production activities. A total of 1536 wells were drilled in the oilfield. Subsequently, a number of oilfields have been discovered in the Upper Assam foreland as well as in Naga Thrust hinterland.

- 3.3 The operational area covers an area of around 10,000 sq. km. in Upper Assam. The systematic approach to exploration has been rewarded with a high success ratio of the exploratory wells drilled. OIL possesses 2D and 3D seismic data acquisition and processing as well as multicomponent seismic data acquisition capability. The geo-scientific interpretation and modelling is done using modern facilities. In addition OIL has set up a Virtual Reality Centre "Kalpalok" to facilitate three dimensional visualization, collaboration and interactive decision making with Decision Centre at OIL's NOIDA office.
- 3.4 Commercial oil/gas accumulation discovered so far, occurs mainly in faulted anticlinal structures within a depth of about 2200-3500 m in Miocene and Oligocene reservoirs, whereas, the Paleocene/Lower Eocene reservoirs are found in general in depths more than 3500 m. Integrated evaluation through geological, geophysical, geochemical and reservoir engineering studies has allowed the company to successfully develop a number of Paleocene/Eocene fields and its distribution and exploit deep (3500-5550 m) thin sand prospects. Presently, Paleocene/Lower Eocene reservoirs are contributing around half of the total oil production from OIL's operational areas in Upper Assam.
- 4.0 Present Exploration Status
- 4.1 Based on the systematic exploration activities over the years, OIL has extended its activities and identified a large number of structural prospects of different sizes in different plays. Many of these structures have been drilled, however, some structures located in logistically difficult terrain and those in areas with imaging issues remains to be explored. Studies indicate that there is still a lot of potential left in the basin for hydrocarbon exploration in matured, partially matured and unexplored part.
- 4.2 In the recent past, a number of studies e.g. Integrated Basin Modeling and Hydrocarbon Prospect Evaluation, Thrust Belt Prospect Evaluation, Study for Stratigraphic Traps, Prospect Evaluation of Hapjan-Chandmari-Baghjan areas, Prospect Evaluation of Greater Shalmari-Naharkatiya areas, study for evaluation of prospects in petroleum exploration lease (PEL) areas in North Bank, Tinsukia, Margherita and Dibrugarh, Integrated IOR/EOR application for Greater Dikom-Chabua, Greater Tengakhat and Greater Kathaloni, a similar study for Identification of Optimal Locations for Horizontal Wells have been carried out by hiring the services of International Consultants. In addition various in- house studies focusing on both matured and frontier areas of exploration in Upper Assam have been carried out for prospect evaluation, extension and development.

5.0 Objective of the Study

- 5.1 To generate new horizontal/infill well locations, evaluate and re-evaluate the prospects/discovered oil/gas fields of Upper Assam Basin in the state of Assam, India within OIL's operational areas with the help of new concepts, fresh ideas by engaging internationally reputed consultants. The study should lead to generation of drillable locations with primary emphasis on horizontal/infill well locations.
- 5.2 The work will be carried out at Duliajan, Assam (India) and OIL's Geoscientists and Reservoir Engineers will be associated with the project. The consultant(s) will be provided with a group of geoscientists for a close work association which will involve technology/knowhow transfer to OIL's geoscientists and Reservoir Engineers.

6.0 Scope of Work

- 6.1 The broad scope of work to achieve the objective of the study is as follows:

- Build geological models of candidate field(s) in PETREL software and re-look into areas from an additional perspective of placement of horizontal/infill wells through reservoir simulation using ECLIPSE software. These software are available at the Company's facility at Duliajan.
- Review the locations already released and awaiting completion of land acquisition or civil preparation, and examine the suitability of placement of horizontal wells in lieu of conventional wells.
- Ranking and prioritization of the identified horizontal/infill locations.
- Conduct techno-economic feasibility analysis for the identified locations
- Suggest well design and completion strategy for the identified locations

- 6.2 The above work will be carried out at Duliajan, Assam utilizing OIL's facilities and along with additional/alternate technology/software that may be provided by the consultant at no additional cost to OIL, if felt necessary by the consultant in consultation with OIL to ensure proper technology and knowhow transfer to OIL's Geoscientists.

- 6.3 The work should be quality controlled at different stages to ensure delivery of a product of high standard.

7.0 Recommendation for Horizontal/Infill Drilling Locations

- 7.1 Based on the above study, the consultant(s) will provide specific recommendations for horizontal/infill drilling and areas for future focus.

- 7.2 The findings and recommendations will be submitted in the form of a report on completion of the project. The Report in both hard and soft copies, will provide details of Data Review, Methodology adopted for the study, Results of the Study incorporating recommendations for drilling locations, Assessment of hydrocarbon reserves to be accrued etc.

The break can either be of 01(one) week each after 04(four) weeks of work at Duliajan or could be of 02 (two) weeks in between after 06(six) weeks of work at Duliajan. One working week means 6 working days (Monday to Saturday, 8 hours a day) with holidays on each Sunday of the week.

8.2 The Geoscientist will initially create geocellular models during the first ten (10) working weeks, and overlap with the Reservoir Engineer during the remaining two (02) working weeks of the Geoscientist to incorporate any refinement to the geocellular model. The Reservoir Engineer then will subsequently conduct reservoir simulation of the refined geocellular model

8.3 The total duration of the contract will be for 26(twenty six) weeks [12 (twelve) working weeks and 02 (two) weeks off]. The duration of the contract can be extended for another 26 (twenty six) weeks under the same rates and terms & conditions with 01(one) week notice time at the sole discretion of the Company.
