1 Emissions Reporting

What are Greenhouse Gas (GHG) Emissions?

Greenhouse gas (GHG) emissions refer to gases that trap heat in the Earth's atmosphere, contributing to global warming and climate change. These include carbon dioxide (CO₂), methane (CH₄), and nitrous oxide (N₂O), among others. GHG emissions are generated from various sources, such as burning fossil fuels, industrial activities, and deforestation.

What are Scope 1 and Scope 2 Emissions?

- **Scope 1 Emissions:** Direct emissions from sources owned or controlled by your company (e.g., fuel combustion in company-owned vehicles, boilers, and generators).
- **Scope 2 Emissions:** Indirect emissions from purchased electricity, steam, heating, and cooling consumed by your company. These emissions occur at the power generation source but are attributed to your business due to electricity consumption.

How to Calculate GHG Emissions?

Emissions are typically calculated using the following formula:

GHG Emissions (kg CO₂e) = Consumption data × Emission Factor

- **Consumption Data:** Fuel consumption (liters), electricity use (kWh), etc.
- **Emission Factor:** Standard values published by organizations like the IPCC

Examples:

1. **Fuel Consumption-Based Calculation (Scope 1):**
 - If you use 1,000 liters of diesel in company vehicles, and the emission factor for diesel is 2.68 kg CO₂e per liter, your emissions are:
 $1,000 \times 2.68 = 2,680 \text{ kg CO}_2\text{e}$
2. **Electricity Consumption-Based Calculation (Scope 2):**
 - If your facility consumes 5,000 kWh of electricity, and the emission factor for your electricity provider is 0.4 kg CO₂e per kWh, your emissions are:
 $5,000 \times 0.4 = 2,000 \text{ kg CO}_2\text{e}$

Sample Responses:

Question	Sample Response
What was the GHG emission for FY24?	a) Scope 1: 10,500 kg CO ₂ e
	b) Scope 2: 8,200 kg CO ₂ e
What was the GHG emission per unit revenue for FY24?	a) Scope 1: 2.5 kg CO ₂ e per INR 1,000 revenue
	b) Scope 2: 1.8 kg CO ₂ e per INR 1,000 revenue

- **There are 2 types of defining the target:**

Absolute Reduction: A fixed percentage decrease in emissions over a period (e.g., 10% reduction by 2030).

Intensity-Based Reduction: Reduction in emissions per unit of production or revenue (e.g., 15% reduction per product by 2025).
